

CATÁLOGO DE APLICACIONES 2016 - 2017

Introducción

LTH, marca líder de acumuladores en México, está consciente de las necesidades y exigencias del dinámico mercado de autopartes. Gracias a sus más de 85 años de experiencia, sabe que para que un motor logre su máxima eficiencia es importante que el vehículo cuente con componentes de la más alta calidad y tecnología.

LTH cuenta con una completa línea de filtros automotrices de excelente calidad, que aseguran una limpieza profunda para el óptimo funcionamiento del motor.

Si usted ya utiliza filtros LTH, ¡Felicidades!: puede estar tranquilo y seguro de haber elegido la mejor opción, ya que son filtros diseñados y fabricados bajo especificaciones de equipo original, sometidos a las más estrictas pruebas que aseguran su excelente calidad y desempeño.

Filtros Automotrices

Los filtros LTH protegen al motor tanto de los contaminantes que hay en el ambiente, como polvo, metales, materiales orgánicos, etc., como de los contaminantes que se generan dentro del motor, producto de la combustión y el desgaste.

Ventajas de los Filtros LTH

Gracias a su avanzada tecnología de producción, ofrecen una excelente calidad que se refleja en su desempeño.

Cuentan con el respaldo de la marca LTH, líder en acumuladores.

Están diseñados de acuerdo a las especificaciones de cada vehículo y motor.

Proporcionan mayor eficiencia de filtración gracias que están elaborados con componentes de la más alta calidad.

Optimizan el rendimiento del motor, y por lo tanto contribuyen al ahorro de combustible.

Los filtros LTH contribuyen a mejorar el desempeño y alargar la vida útil del motor.

Filtros de Aire

El motor de combustión interna requiere para su funcionamiento grandes cantidades de aire, mismo que debe estar limpio para evitar efectos indeseables en el motor.

Los filtros de aire LTH garantizan la entrada de aire puro a la cámara de combustión y regulan la cantidad de aire aspirado.

¿Por qué elegir filtros de aire LTH?

Las propiedades mecánicas del material garantizan un sellado perfecto y mantienen las propiedades del filtro durante toda su vida útil.

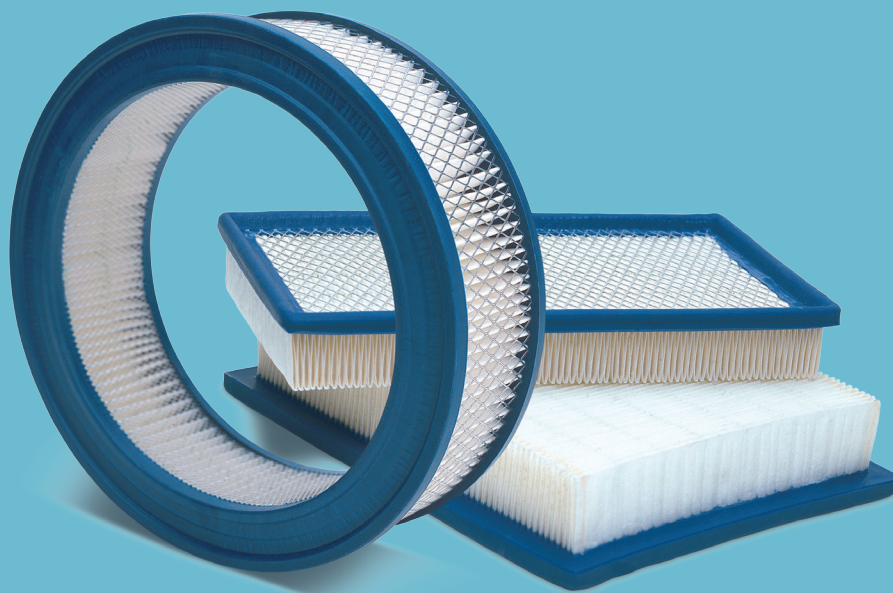

¿Por qué es importante realizar el cambio de filtro de aire?

Si el filtro de aire no se cambia en el período indicado en el manual del vehículo, puede ocasionar:

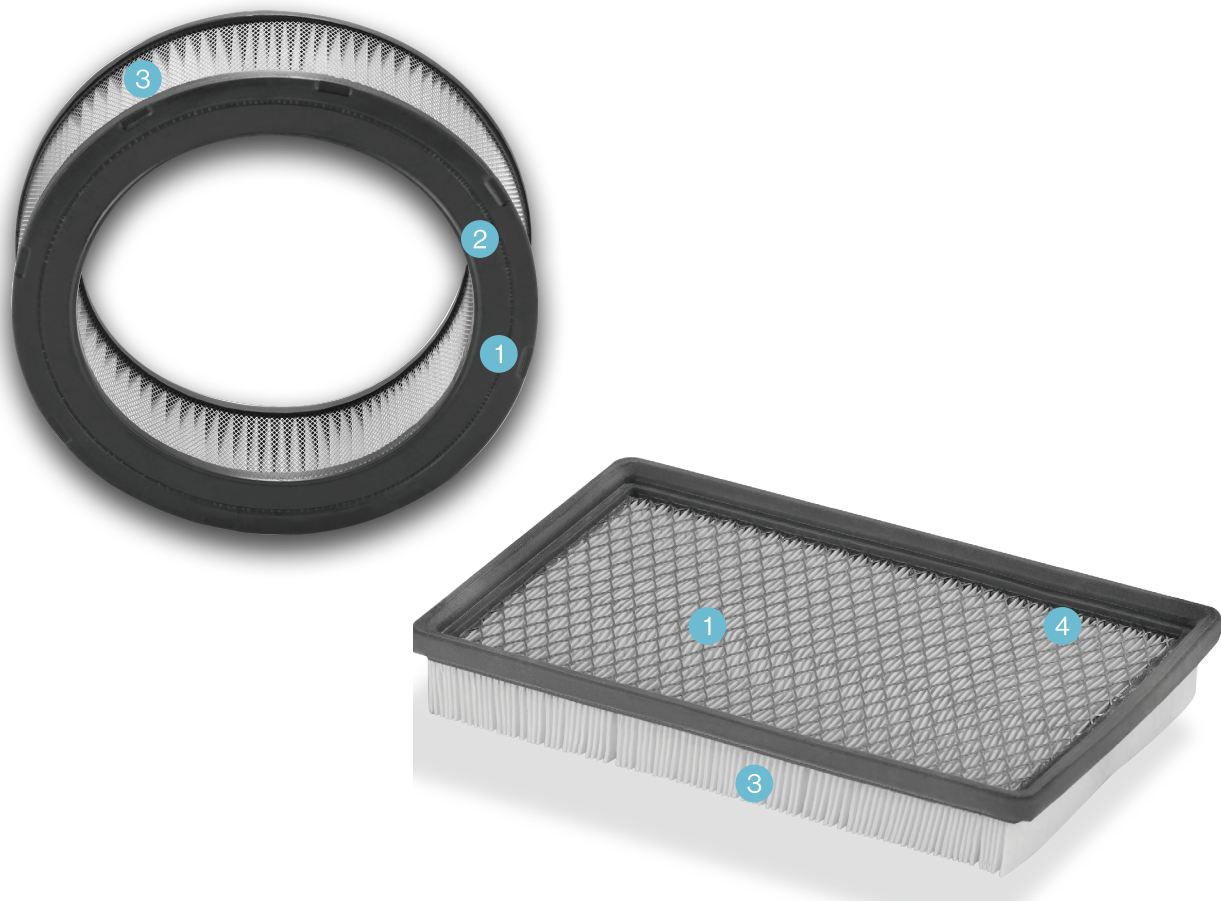

Aumento del consumo de combustible.

Mayor contaminación originada por combustiones inadecuadas.

Acelerado desgaste y pérdida de potencia del motor.

Componentes de los filtros de aire

1. Malla de metal

2. Sello flexible de plastisol

3. Papel filtrante de celulosa con resina fenólica

4. Sello flexible de poliuretano

Filtros de Aceite

El lubricante es un fluido crítico en cualquier vehículo automotor. Forma una película resbaladiza entre las partes móviles del motor, disminuyendo la fricción y reduciendo de manera considerable el calor, el desgaste y la pérdida de potencia.

Los filtros de aceite LTH retienen las partículas contaminantes provenientes del medio ambiente y las producidas por el motor, garantizando su óptimo funcionamiento al evitar que las partículas abrasivas perjudiciales provoquen su desgaste.

¿Por qué elegir filtros de aceite LTH?

Contienen desde un 15% hasta un 60% más área de filtración que otras marcas.

Logran una mejor fijación al motor debido a que contienen mayor número de hilos en la rosca.

Su soldadura en tapa y contratapa previenen fugas de aceite o desensamble.

Cuentan con un diafragma reforzado que mantiene el filtro lleno de aceite, asegurando la lubricación al arranque del motor.

La profundidad de plisado, 20% mayor a la de otras marcas, aumenta la superficie de filtración e incrementa la vida útil del filtro.

Contienen un resorte que asegura las partes internas del filtro con firmeza durante las variaciones de presión generadas por el funcionamiento del motor.

Elaborados con lámina de mayor calibre, son filtros altamente resistentes a la fatiga, golpes y excesos de presión.

¿Por qué es importante realizar el cambio de filtro de aceite?

El cambio de filtro de aceite es fundamental para mantener limpio el motor. Debe hacerse en los períodos indicados en el manual del vehículo, para evitar consecuencias como:

Desgaste prematuro de las piezas del motor por abrasión.

El aceite se degrada de una manera acelerada.

Reducción de desempeño: si el filtro no se cambia cuando es debido, la válvula de seguridad puede abrirse, permitiendo que el aceite arrastre suciedad al motor.

Componentes de los filtros de aceite

1. Tapas de metal

2. Papel filtrante

3. Tubo de lámina perforada

4. Válvula de alivio

5. Válvula anti-retorno

6. Empaque

Filtros de Gasolina

La función de los filtros de gasolina LTH consiste en limpiar el combustible antes de que llegue a los sistemas de alimentación, ya sea de carburación o de inyección electrónica, evitando así la entrada de contaminantes contenidos en el mismo combustible, al motor.

¿Por qué elegir filtros de gasolina LTH?

Cuentan con un sello de plastisol que evita el paso alterno de combustible sin filtrar hacia el sistema.

Proporcionan filtración 99.9% confiable y máxima vida útil.

Utilizan materiales resistentes a las altas presiones que provocan las bombas de gasolina en los sistemas electrónicos de inyección.

¿Por qué es importante realizar el cambio de filtro de gasolina?

El cambio de filtro de gasolina es fundamental para el funcionamiento correcto del motor. Debe hacerse en los períodos indicados en el manual del vehículo, para evitar consecuencias como:

Funcionamiento errático del motor con pérdida de potencia.

Consumo excesivo de combustible.

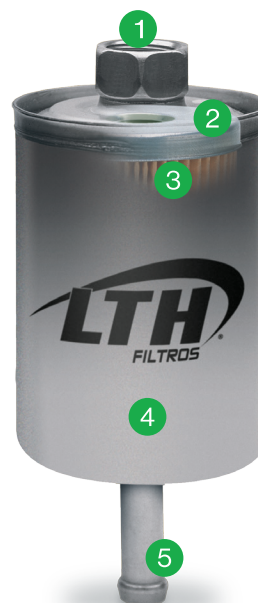

Desgaste en espreas de carburación y/o en inyectores.

Componentes de los filtros de gasolina

TIPO PLÁSTICO

TIPO METÁLICO

TIPO PLÁSTICO

- 1. Pipeta de salida
- 2. Tapa

- 3. Elemento filtrante
- 4. Vaso

- 5. Pipeta de entrada

TIPO METÁLICO

- 1. Pipeta de salida
- 2. Tapa de elemento filtrante

- 3. Elemento filtrante
- 4. Bafle o vaso

- 5. Pipetas

Filtros de Cabina

Los Filtros de Cabina LTH están diseñados para retener las partículas contaminantes a través del sistema de ventilación, protegiendo la salud del pasajero y proveyendo de aire fresco al interior de vehículo.

Ventajas de los Filtros de Cabina LTH

Apoya el buen funcionamiento del sistema desempañador del auto para evitar accidentes.

Ayuda a evitar enfermedades como: asma, dolores de cabeza, fatiga, entre otros, a través de la retención de partículas contaminantes.

Los filtros LTH de cabina contribuye a la protección del pasajero.

¿Por qué es importante realizar el cambio de filtro de cabina?

El cambio de filtro de cabina reduce la exposición a los contaminantes del medio ambiente y mantiene limpio el interior del vehículo, previniendo:

La inhalación de partículas microscópicas por parte de los pasajeros.

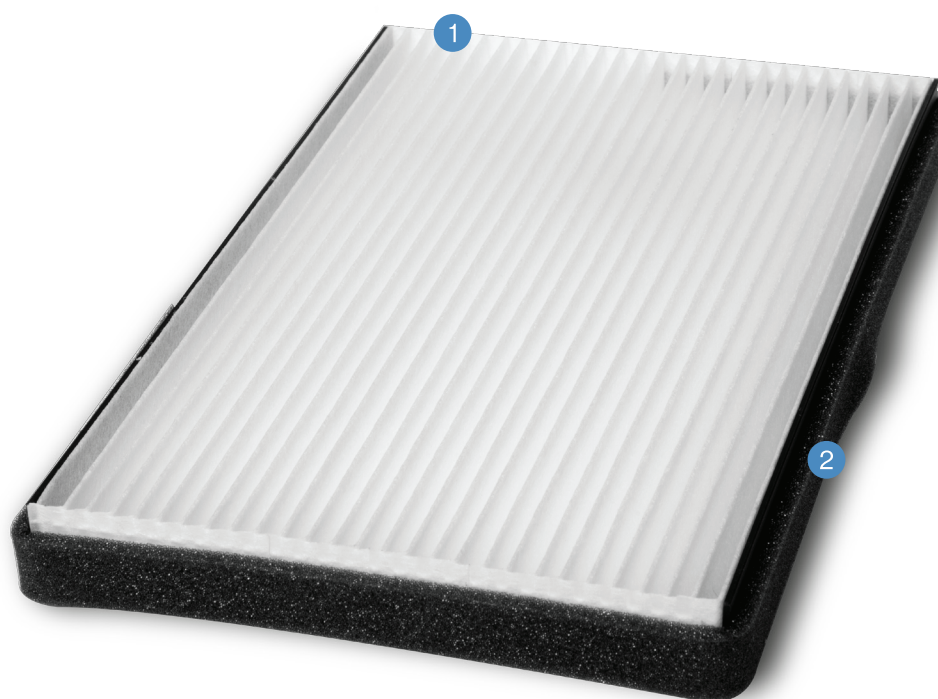

El depósito de polvo en el interior del automóvil.

La reducción de la eficiencia del sistema de ventilación.

El mal funcionamiento del desempañador dentro del automóvil.

Componentes de los filtros de cabina

1. Papel plisado
Material: Spunbond PET / CA
(fibras sintéticas con carbón activado)

2. Soportes de filtro
Material: PET

Problemas más comunes del sistema lubricación

Es poco común que el sistema de lubricación presente problemas, pero cuando éstos ocurren por lo general se reflejan en el filtro de aceite.

Los problemas más comunes y que se reflejan en el filtro de aceite son:

Filtro de aceite abombado o inflado: Cuando un filtro se abomba o se infla, nos indica que éste fue sometido a una presión excesiva fuera de lo normal, ya que los motores trabajan a una presión de entre 40-60 lb/in².

Filtro para aceite colapsado: filtro que ha sufrido aplastamiento del tubo central deformándose hacia el centro perdiendo su redondez original.

Filtro con fuga en el engargolado: Se presenta cuando el motor es arrancado después de la instalación. Puede ser causada por sobre apretar el filtro con herramienta para desmonte, lo que daña el ensamble.

Filtro con fuga por el empaque: Suele presentarse cuando el filtro es instalado y apretado normalmente, sin haber lubricado el empaque previamente.

Filtro vacío: Puede presentarse por un desgaste excesivo de la bomba de aceite, si la válvula reguladora de presión se queda en posición abierta, o cuando la válvula de alivio del motor ha permanecido en posición abierta debido a la saturación del elemento filtrante.

Nota: Estos problemas no son atribuibles al filtro, sino a las condiciones mecánicas del motor.

Una amplia red de distribución nacional enfocada en brindarle el mejor servicio

LTH, marca líder de acumuladores en México, cuenta con una extensa red de distribuidores y un profesional equipo Comercial y de Mercado. Mediante personal altamente calificado, podemos brindarle la atención requerida y el mejor servicio.

Recuerde: no cualquier filtro puede ofrecerle el alto valor precio- beneficio que **LTH** le da, así como el respaldo de una marca con más de 85 años de experiencia al cuidado de su automóvil.

Garantía de Filtros LTH

Johnson Controls Enterprises México, S. de R.L. de C.V. garantiza cada filtro LTH contra cualquier defecto de fabricación o de sus materiales, durante el período de servicio recomendado por el fabricante del vehículo, y siempre que sea instalado según su correcta aplicación.

En caso de alguna reclamación por daños al motor, atribuibles a una posible falla en el filtro, Johnson Controls Enterprises México, S. de R.L. de C.V. a través de su personal calificado y autorizado, evaluará las causas del problema y definirá si son atribuibles o no al filtro, antes de proceder a cubrir cualquier reparación, misma que se limitará únicamente a devolver la condición del motor al momento anterior a presentarse la falla. Johnson Controls Enterprises México, S. de R.L. de C.V. no es responsable por otros daños o perjuicios.
